Your Daughter's Marriage	₹ 30 lacs
OLD AGE TAX	₹ 40 lacs
Total	₹ 1.1Crore

Have you accounted for the **OLD AGE TAX?**

Old age will come upon you faster than you think and clearly expenses fuelled by inflation will creep into every aspect of your life. You will shell out extra rupees for every commodity on your shopping list. Prices of basic necessities will be several times higher than that of luxuries today. And suddenly, it will dawn upon you that Old Age Tax is the new expense you will deal with, every single day post your retirement. In simple words, Old Age Tax is the cruel inflation that will bite deep into your savings. Investing in equities over the long term could help you deal with the burden of Old Age Tax. So, consider investing in range of schemes today.

Expertise that's trusted

FUND MANAGER SPEAKS

Equity market

Macro worries on inflation driven by high prices of crude and food, and the possibility of interest rate hikes caused the markets to marginally dip in April '11. Interest rate hikes by the Chinese Central Bank and the European Central Bank added to the fears of monetary tightening with the Sensex closing down 1.6% at 19,136 and the Nifty closing down 1.4% at 5,750. Reflecting the greater domestic retail participation levels, the month saw mid and small capitalization stocks outperform large caps. For the month FIIs were net buyers of USD 1.6 Billion (buyers of USD 1.58 Billion in March '11), while Domestic mutual funds were net sellers of USD 103 million (buyers of USD 86 million in March '11). Sectorally Auto, Consumer Durables, Capital Goods, FMCG, Health Care, Metal and PSU indices outperformed, while the indices for Banks, Software, Oil & Gas, Power and Real Estate underperformed the Sensex.

In economic data flow, The Index of Industrial Production (IIP) reported for the month of February 2011 showed a growth of 3.6% YoY (3.9 %YoY in January 2011 as per revised data). For the period April 2010 to February 2011, IIP grew at 7.8 % YoY (compared to 10% same period last year). On a sectoral basis, in April 2010- February 2011, Manufacturing grew by 8.1% YoY, Mining by 6.5%YoY (9.6% same period last year) - largely being impacted by transportation bottlenecks and environmental clearances, and Electricity by 5.4% YoY. On a use basis, in April- February 2011, Capital Goods grew by 8.7% and Growth in Consumer Goods of 7.5% was driven by growth of 21.8% YoY in Consumer Durables. The Manufacturing Purchasing Managers Index for April 2011 which is a leading indicator of economy came in at 58 (57.9 in March 2011). The PMI subcomponents reflected that raw material price are expected to rise strongly consequently causing a rise in output prices in face of a strong domestic demand environment and international commodity price pressures. The PMI numbers are also reflective of the resilience of Indian manufacturing sector in face of tightening of monetary policy and high inflation.

Corporate results of ten BSE Sensex companies that have reported March '11 ended quarterly results so far, showed a 13.7%YoY Sales growth with Profit after tax growing 13.9% YoY inspite of input pressure impacting operating margins due to strong balance sheet positions that kept interest costs in check. For a larger universe of companies that reported March '11 quarter results by end of April '11, sales grew at a robust rate of 20% plus YoY, however margin pressures due to input cost rise led to net profit growth lagging sales growth for these companies.

The Indian Metrological Department (IMD) has forecast the southwest monsoon 2011 (summer rainfall) to be normal- 98% of long period average with a low probability of deficient rainfall. The South Asia Climate Outlook Forum too predicted a normal monsoon rainfall in 2011 for South Asia, based on the fact that La Nina weather phenomena that aids monsoon in the region would continue into June. All this gives hope for a good summer crop production which will help alleviate food inflation and propel agricultural growth on which 60% plus of the population depends on for income.

In other news of economic importance, Standards and Poor's Ratings Services affirmed India's 'BBB-' (Investment grade) long term and A3 (Investment grade) short term rating with a stable outlook. S&P stated that "The ratings on India reflect the country's good economic growth prospects and its fairly strong external position. Positive investment trends further underpin the ratings, with foreign direct investment and portfolio investments covering a large share of the current account deficit. Nevertheless, the country's weak fiscal profile and structural problems temper its strengths. Structural problems not only constrain efficiency, but also preclude a large share of the population from benefiting from the country's rising prosperity".

At the time of writing this, RBI came out with Annual Monetary and Credit Policy for Financial Year ending March 2012 emphasizing "High and persistent inflation undermines growth by creating uncertainty for investors, and driving up inflation expectations. An environment of price stability is a pre-condition for sustaining growth in the medium-term. Reigning in inflation should therefore take precedence even if there are some short-term costs by way of lower growth". As a result, RBI took several policy related actions. Repo rate (rate at which banks borrow from the RBI) and Reverse Repo rate (rate at which banks lend to the RBI) are hiked by 50 basis points each to 7.25% and 6.25% respectively. Henceforth, Repo rate will be the sole policy signaling rate, while the Reverse Repo will be pegged at 100 basis points below the Repo Rate. Furthermore, the RBI has introduced a new liquidity window - known as 'Marginal Standing Facility' or MSF - for banks to borrow up to 1% of their net demand and time liabilities. The rate of interest on MSF would be 100 bps above the repo rate. Bank Rate at 6% and Cash Reserve Ratio at 6% were left unchanged. Taking cognizance of higher interest rates across maturities and a prelude to deregulation of the savings bank deposit rate of banks, RBI raised the savings rate to 4% from 3.5%.

To drive the financial inclusion initiative, Banks have been asked to ensure at least 25% of their new branches are set-up in tier 5 and 6 cities. In relation to financial markets - RBI assured to shortly introduce guidelines for Credit Default Swaps; allowing short sale of Government Securities for up to three months (up from five days now); and, allowing FIIs to churn up to 10% of the market value of their government security portfolio within a year. On the regulatory front, provisioning requirement on certain categories of non-performing advances and restructured assets is increased to better manage the risks arising from lower credit quality of such assets. Additionally, investments of Banks in liquid schemes of debt oriented mutual funds is being subjected to a limit of 10% of net-worth to prevent any risk to systemic stability as a result of round tripping of funds. The policy action overall aims to contain inflation by reigning in demand side pressures, while anchoring inflation expectations; and expects to sustain growth in the medium-term by containing inflation. The RBI projects GDP growth of 8% for FY12, and WPI inflation of 6%, with upward bias, by March 2012.

In May '11, the markets will look to the remaining corporate results reported for quarter and fiscal year ended March '11 to get direction. Monetary Policy moves by central bankers in emerging markets like China, Brazil and developed markets like Europe and US will continue to influence global investor risk appetite.

Debt market

The month began with new 10 year benchmark paper auction, where in the cut off was set aggressively at 7.80%. However, after the release of the March inflation number, the market witnessed a big sell off, fearing aggressive tightening by Reserve Bank of India in its May credit policy. As against the expected inflation of around 8.25-50%, the March inflation came at 8.98%, which resulted in the major sell off. Added to that, the high overdraft balance of central government with RBI and the resultant auction of Cash Management Bills and the hike in Treasury Bill auction size also led to the bearish mood of the market. The 10 year bench mark paper closed the month at 8.13%

Liquidity remained relatively comfortable compared to previous month due to government spending. The government has draw down Rs.480 Bn overdraft from RBI as on 22nd April 2011. The average borrowing by banks under LAF window during the month was to the tune of Rs. 102 Bn compared to Rs.820 Bn in the previous month. The bank credit continue to outpace the deposit growth, though the gap is getting narrowed down in the last few months, as the banks have been aggressively mobilizing deposits offering higher deposit rates. As per the latest available data, the y-o-y growth in bank credit now stands at 22% compared to a growth of 17% in deposits. While the overall credit deposit ratio stands at 74%, the incremental credit/deposit ratio on y-o-y basis is now stands at 91% as on 8th April 2011.

The money market rates, which had eased significantly in the first half of the month, again moved up on account of increased borrowing by the government through higher than planned TBill auction and through Cash Management Bills (CMB). The additional borrowing during the month, by way of Treasury bills was to the tune of Rs.60 Bn and through CMB was to the tune of Rs.260 Bn. As a result of that, the 3month TBill rates at 7.6%, moved up by around 30 basis points compared to previous month. The 3 month and 1 Year CD rates which had fallen to 8.5% & 9.75%, too moved up to by 15- 30 basis points. The activity in the corporate bonds remained subdued during the month, as most of the trades continued to be at the shorter end of the curve. The AAA 10 year bond closed the month at 9.25% compared to 9.15% in the previous month, and the 5 year AAA bond closed the month at 9.30% compared to 9.20% in the previous month.

On the macro economic data released during the month, the IIP index in Feb-11 was at 342.9 implying a growth of 3.6%, much lower than growth rate of 15.1% noted in Feb-10. IIP growth for Feb-11 was lower than market expectations of 4.5% - 5%. Previous month's growth was revised upwards with Jan-11 growth revised from 3.6% to 3.9%. The average growth rates at 8.1% was lower in Apr-Feb 11 period, compared to 9.9% Apr-Feb 10

The WPI index moved up from 146.0 in Feb-11 to 148.0 in Mar-11. This implied inflation for Mar-11 at 8.98% (y-o-y), higher than previous month inflation of 8.31%. The inflation was much higher than market expectations of 8.3-8.5%. RBI in its March monetary policy review had revised its inflation estimate March -end at 8%. It is nearly 1% higher than RBI estimates. For the month of Jan-10, the inflation was again revised upwards significantly from 8.23% to 9.35%. On this basis, Mar-11 inflation is likely to be around 10% when revised finally. Core inflation, Manufacturing-ex Food, for Mar-11 surged to touch 7.08% compared to 6.10%, noted in previous month. The core inflation index is at its highest in the time-series since Apr-04.

Going forward, we expect bond market to remain under pressure. Any departure from the current calibrated approach to rate tightening by RBI, which is more likely the case given the high inflation, may lead to further sell off in the G-sec market. The likely hood of revision in the petroleum prices, which is long overdue, may further worsen the situation. The short term money market rates too will be under pressure due to increased borrowing by the Government through CMB and Treasury Bills.

TATA EQUITY P/E FUND

Fund positioning: Invests atleast 70% of its net assets in stocks with rolling P/E ratios less than that of the BSE Sensex.

Notes and Data in the Fact Sheet

- The Std. Dev., Sharpe Ratio, Portfolio Beta & R-squared are based on one month return calculated using last 3 years data.
- Price/Earning Ratio, Price/Book Value Ratio, are based on the historical earnings and accounting numbers, and have been computed only for the invested portion of the portfolio.
- The standard deviation is used to measure the volatility of returns.
- Sharpe Ratio is the measure of the risk-adjusted performance. It is calculated by subtracting the risk-free rate from the average rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns.
- Beta is the measure of the portfolio's volatility to its respective benchmark.
- R-squared is a measurement of how closely a portfolio's performance correlates with the performance of benchmark index.
