Investment ka pehla kadam

Start a Tata SIP today in our range of schemes from as low as ₹ 500/- per month.

Tata Infrastructure Fund | Tata Equity P/E Fund | Tata Dividend Yield Fund | Tata Pure Equity Fund | Tata Balanced Fund

Mutual Funds investments are subject to market risks, read the scheme information documents carefully before investing.

FUND MANAGER SPEAKS

Equity market

Concerns on sustainability of the global economic recovery caused the Indian markets to end the month with marginal gains, even though they were up mid month by as much as 3.3% (as represented by the BSE Sensex). The BSE Sensex ended the month up 0.6% at 17,971 while the S&P CNX Nifty closed up 0.7% at 5402. The month saw a continuation of the recent out performance of small and mid-cap stocks over large cap stocks, reflecting favourable risk appetite of investors towards the Indian equity markets. Sectors like Auto, Banking, Consumer Durables and FMCG outperformed the Sensex, while sectors like Capital Goods, Health Care, IT, Metals, Oil & Gas, Power and Realty underperformed the index. For the month, in cash equities, FIIs were net buyers to the tune of approximately USD 2.5 billion (buyers of USD 3.6 bn in July '10), while Domestic Mutual Funds were net sellers of USD 677 million (sellers of USD 942 mn in July '10).

The Index of Industrial Production (IIP) reported for the month of June '10 showed a growth of 7.1% YoY, which was lower than May '10 growth of 11.3% YoY (as per revised estimates) due to a fading base effect and higher than expected moderation of Capital goods growth from 34.2% to 9.7%. On a use basis, the growth was driven by consumption rather than investment, with Consumer Goods showing a growth of 8.3% YoY (May '10 growth of 7.4%) led primarily by durables production growth of 27.4% YoY (23.7% in May '10). GDP numbers for the quarter ended June '10 of 8.8% YoY (8.6% YoY growth in the previous quarter ended March '10) reflected strong economic growth momentum. Industry continued to grow at double digit levels of 10.3% YoY (13.3% YoY growth in the previous quarter). Service sector upped its growth to 9.7% YoY from 8.4% YoY growth in the previous quarter. Agriculture growth too was up to 2.8% YoY (0.7% YoY growth in the previous quarter), on the back of improved sugar cane and pulses production. Going ahead, the moderation in Industrial growth due to the higher base kicking in is expected to be compensated by higher agriculture output in light of a good monsoon (summer rains). On the monsoon front, the data released by the Indian Meteorological Department (IMD) shows that cumulative rainfall from 1st June to 25th August '10 was only 2% below normal. The spatial distribution was good, with 30 out of 36 sub- divisions of the country receiving excess to normal rains, resulting in overall improvement in summer crop sowing area by 10% YoY. Direct tax collections (advance tax) of the April '10 to July '10 quarter rose 15.75% YoY, buoyed by tax collections from the corporates, which reflects well on the momentum in corporate profitability.

On the policy front, the Central Government introduced the Direct Tax Code Bill, 2010 in parliament and referred it to a select committee of the parliament for scrutiny. The bill envisages a number of reforms to the Tax regime relating to personal and corporate taxes. Notable is that long term capital gains tax is proposed to remain nil while short term capital gains tax is mooted to be 50% of the tax slab. Another key highlight is the proposed reduction of corporate tax rate to 30% (versus 33.2% now). In another move forward, on 25th August 2010, the lower house of parliament passed the Nuclear Liability Bill, paving the way for opening up of the country's nuclear energy market to global equipment suppliers, which could potentially be to the tune of USD 150 bn in the coming years. What was also significant was the co-operation between the government and the principal opposition party in passing of the bill, after concerns of the opposition party were addressed through several amendments.

While lower growth in developed economies looks baked in everybody's expectations, global Purchasing Managers Indices, low global inventory levels and improving capital utilization along with still accommodative monetary policy (which are not in sync with the expectations of double dip recession) are supportive of equities world wide. It may also be noted that globally, investors are underinvested in equities and overweight in sovereign bonds by most historical standards. Contra investing in such cases may just generate better relative returns for investors. In light of these facts, it seems stronger growth in emerging markets will continue to attract inflows of capital to emerging market domestic demand oriented themes. While the consumption theme through consumer non discretionary and discretionary spend has been in play and probably will continue, one could also see investors in these markets play the next derivative of domestic consumption through the infrastructure theme.

In September '10, the markets would look at the advance tax numbers for a feel of corporate results to come for the quarter ended September '10, RBI's mid-quarter review of monetary policy on Sep. 16th, while global events would continue to influence investor sentiments.

Debt market

The bearish trend in the bond market continued in the month of August as well, as investors worried about the bench mark status of the most actively traded 10 year paper, 7.80%-2020. In the rush to avoid illiquidity in the bench mark bond, many of the market participants sold it and bought in to the recently issued 8.13% 2022 paper, which resulted in the 10 year bench market yield touching a high of 8.07%. However, towards the end of the month, the choice of auction securities scheduled for 1st week of September allayed these fears, and this resulted in traders buying back the bench mark bond, leading to the yields softening quite a bit.. Towards the end of the month, the 10 year bench mark yield was trading around 7.93%, off from the month high of 8.07%.

Unlike the bearish trend witnessed in the g-sec market which was largely due to the technical factors explained above, the corporate bond market remained steady. While the AAA rated 10 year bond traded in the range of 8.75-8.80%, the 5 year AAA rated bonds traded in the range of 8.5-8.55%, more or less unchanged compared to previous month. As the sovereign yields rose and the corporate yields remained steady resulting in credit spread easing by 10-15 bps.

During the month, the liquidity situation witnessed significant improvement, on the back of government spending. Compared to average deficit of around 46K witnessed in the previous month, the average liquidity support provided by the Reserve Bank of India for the month of August dropped to 11 K. The liquidity is expected to remain easy till first half of next month, however, the same may again go in to deficit mode in the second half on account of advance tax outflows. On the money market front, the 3 month and 1 year Treasury Bills traded in the range of 6.20% and 6.55% respectively, while the 3 month and 1 year CD rates traded in the range of 7.1% and 7.9% respectively.

The inflation as measured by WPI dipped to 9.97% YoY in July from 10.55% in June, leading to optimism that the period of double digit inflation may be behind us. However, the pattern of significant upward revisions to past data continued in this month as well. The May WPI was revised from 10.16% to 11.14% which suggest that it may be premature to conclude that inflation has dipped below 10 %.

The IIP growth for June 2010 stood at 7.1%, compared to 11.3% for the month of May 2010. This was significantly lower than the market expectations of 8%-9%. Though the market was expecting a lower number due to base effect, the lower than the expected growth rate may be pointing to some moderation in the industrial growth.

The Q1 GDP grew at 8.8% compared to 8.6% in the previous quarter. This number is more or less in line with market expectation. The best performing sectors in Q1 were manufacturing that grew at 12.4% and 'trade, hotels, transport and communication' that registered a growth rate of 12.2%. Agriculture marked a positive growth of 2.8%, industries grew at 10.3% while the services sector grew at 9.7%.

TATA INFRASTRUCTURE FUND

Fund positioning: Invests predominantly in companies with potential of creating long term value from expected investments in infrastructure oriented sectors.

Fund manager comment :

The 1st Quarter GDP for FY11 has come in at 8.8%, compared to 8.6% in the previous quarter, which reflects the continued growth momentum in the economy. Monsoon has also been quite good during the year, which will further boost the overall GDP growth. Reflecting the buoyant growth scenario, the stock market has been on a roll, with FIIs investing aggressively in the Indian market. Due to high inflation and the consequent RBI action on rate front, the long terms rates are at high levels. However, off late the pressure of inflation appears to be easing a bit, with July WPI coming at 9.97%. We expect the inflation to ease substantially by the 3rd Quarter. With majority of the borrowing programme getting completed in the first half (63%), we expect the supply dynamics to have a positive impact on the long term yields. This augurs well for the bond market going forward. In such a scenario, the hybrid fund offers an excellent investment opportunity.

TATA LIQUID FUND

Fund positioning: To generate steady income through investments in short dated papers and maintain high liquidity of the portfolio.

Fund manager comment :

The liquidity situation has improved substantially compared to previous month. However, by mid September, there could be pressure on liquidity on account of advance tax outflows. The short term money market rates are currently at elevated levels, which is quite attractive from investment perspective. We are looking to invest at the current levels and also to add on upticks.

Fund manager comment :

The liquidity conditions have improved in the month of August compared to previous month. The average net LAF borrowing which was in the order of 46K during the previous month has come down to 11K during this month. However, the liquidity may get strained during the second half of September 2010, on account of tax outflows. The money market rates are currently at elevated levels which may remain so for some more time till the liquidity situation returns to surplus mode. Having said, that, the current levels are an excellent investment opportunity. We have positioned our funds accordingly, to profit from the prevailing high rates, as major portion of our fund will get repriced in the current quarter, thereby increasing the overall portfolio return.

Past performance may or may not be sustained in future. After payment of dividend the NAV will fall to the extent of dividend payout and statutory levy, if any. (Unit face value - ₹ 10/-).

Notes and Data in the Fact Sheet

- The Std. Dev., Sharpe Ratio, Portfolio Beta & R-squared are based on one month return calculated using last 3 years data.
- Price/Earning Ratio, Price/Book Value Ratio, are based on the historical earnings and accounting numbers, and have been computed only for the invested portion of the portfolio.
- The standard deviation is used to measure the volatility of returns.
- Sharpe Ratio is the measure of the risk-adjusted performance. It is calculated by subtracting the risk-free rate from the average rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns.
- Beta is the measure of the portfolio's volatility to its respective benchmark.
- R-squared is a measurement of how closely a portfolio's performance correlates with the performance of benchmark index.
