FUND MANAGER SPEAKS

Equity market

A big push for reforms along with positive macro data helped the Indian markets move up, inspite of poor global sentiment due to the European debt crises and weak US economic data. The BSE Sensex rose 4.5% to close at 17,701, while the Nifty rose 4.4% to close at 5,313. The month saw small cap stocks outperform mid and large cap stocks, reflecting increasing risk appetite of investors with respect to Indian markets. Sectors like Auto, Consumer Durables, Capital Goods, FMCG, Health Care, and Oil & Gas outperformed the Sensex, while sectors like Banking, Software, Metals, Power, PSU and Realty underperformed the index. For the month, in cash equities, after being significant sellers in the month of May '10, FIIs were net buyers to the tune of approximately USD 2.3 bn, while Domestic Mutual Funds were net sellers of USD 236 mn.

The Index of Industrial Production (IIP) reported for the month of April '10 showed a growth of 17.6% YoY (March '10 growth of 13.9% YoY). On a sectoral basis, the highlight was manufacturing growth which came in at 19.4% YoY (March '10 growth of 14.7% YoY), driven primarily by machinery, metals, transport equipment and food products production. On a use basis, there was a spectacular rise of 72.8% YoY in Capital Goods after the already strong growth of 28.4% YoY in March '10. Consumer Goods showed a growth of 14.5% YoY (March '10 growth of 10.7%) led primarily by durables production growth of 37%. It is worth noting that durables demand as reflected in the IIP numbers has been very strong since April '09 reflecting rising aspiration levels and income growth across the country. Balance of Payments data for quarter ending March '10 showed an overall surplus of USD 2.1 billion, helped by capital inflows of USD 16.1 billion, even though rising imports (oil and non oil) and lower flows from invisible led to the current account deficit widening to USD 13 billion as compared to USD 12.2 billion in the previous quarter.

On the monsoon front the Indian Meteorological Department (IMD) has stated that the annual monsoon rains were 12% below normal between June 1st to 27th. The seasonal rains were low in the soybean growing regions of central India. The IMD expects the monsoons to pickup latter in the season, and has forecast a rainfall of 102% of the long period average for the current monsoon.

On the policy front, the government has decided to decontrol petrol prices, while declaring an intention to eventually decontrol diesel prices too. The government will however continue to subsidize Kerosene and LPG which are predominantly used for consumption by the weaker sections of society. Concurrently as a step in the direction of decontrol the government raised the price of petrol, diesel, kerosene and LPG. Decontrol of fuel prices is a politically bold step by the government, which will result in increased profitability of Indian PSU refiners while also bringing down the budget deficit. The Direct Tax Code and Goods and Service tax are other reforms being discussed by the government at this stage. Such a significant reform push has impressed investors around the world, which is reflective in the inflows into the equity markets in the month of June '10. In another policy move, Telecom Regulatory Authority of India (TRAI) has proposed increasing the Foreign Direct Investment (FDI) limit to 74% in broadcast carriage services, teleport and multi-system operators.

In July '10, the markets will look to the progress of monsoons, Monetary and Credit Policy Review of RBI and quarterly results for comfort in a turbulent international environment. Events in Europe, China and US will continue to impact short term investor sentiment.

Debt market

The bond yields during the month of June were tightly boxed in a range of 7.50- 7.65%, having digested a spate of negative as well as positive news. On the negative side, rising inflation, partial deregulation of fuel prices, which fuelled the speculation of an interim rate hike by the RBI, drove yields to the higher end of the range. On the positive side, apart from the prospect of improving the fiscal situation on the back of the successful 3G/WBA auction, falling global bond yields owing to fresh signs of weakness in the global growth, resulted in yields trudgung towards the lower end of the range. Negative macro economic data in the USA, especially the weak employment numbers as well as talk of China taking steps to cool its economy, triggered a sharp fall in global equity markets and a huge rally in bond markets. The 10 year US yield which was trading at 3.28% at the end of the previous month is currently trading at a one year low of 2.93%. Compared to this, the domestic 10 year benchmark yield closed the month at 7.55% compared to 7.56% in the previous month.

The liquidity continued to remain tight during the month mainly on account of the 3G auction as well as tax outflows. The liquidity support provided by the RBI through the LAF window averaged around Rs.50, 000 Crores, though it further increased to Rs.78, 000 Crores towards the end of the month, due to advance tax as well as BWA auction outflows. The tight liquidity condition resulted in money market rates remaining at elevated levels, with NSE Mibor averaging around 5.39%. The corporate bond market mimicked the g-sec market and remained flat. The 5 year AAA corporate bond yield closed at 8.17% compared to 8.15% in the previous month. Similarly, 10 year AAA corporate bond yield remained flat at 8.67% compared to 8.66% in the previous month.

The government closed the broadband spectrum auction with a net inflow of Rs 38,500 Crores. The auction, along with the 3G spectrum auction, has netted the government a total of Rs 106,000 Crores, three times the budgeted estimate of Rs 35,000 crore. The auctions have definitely improved the outlook on government finances and if the government uses the money prudently the fiscal deficit for 2010-11 can be much lower than the projected 5.5% of GDP. Added to this, the momentous decision of the Central Government to completely deregulate the petrol price and partially deregulate the diesel prices is a big positive for the fiscal situation. This augurs well for the bond market in the medium to long term.

On the macro economic data released during the month, the rising trend in inflation continued to dominate the bond market. Inflation measured by the widely-tracked wholesale price index touched 10.16% for the month of May, driven by an increase in prices across segments. WPI inflation was marginally lower at 9.59% in April, but the final figures could be higher as the provisional data for March was revised from 9.9% to 11.04%. The rising inflation particularly stickier manufacturing inflation is a worrying sign and may attract harsher monetary action by RBI in the days ahead.

To ease the liquidity situation, the RBI took several steps, like reducing the size of the T-Bill acution, buy back of near term Government securities and partially reducing the size of borrowing plan. With these measures, as well as inflows on account of G-sec redemption & coupon flows in excess of 55K during the next month are expected to ease the prevailing tight liquidity conditions.

Going ahead, we expect the money market yields to come off from the present elevated levels, on account of the improved liquidity condition, despite the prospect of RBI hiking the rates in the July review meeting. On the bond market, we expect the market to remain range bound, with bouts of volatility on account of inflation and talk of rate tightening. However, any spike in yield will again be limited, in view of falling bond yields in the developed markets.

TATA INFRASTRUCTURE FUND

Fund positioning: Invests predominantly in companies with potential of creating long term value from expected investments in infrastructure oriented sectors.

Average Net Assets as on 30/06/2010 (Rs. Lacs) : 2,15,482.76

Fund manager comment :

The economy maintained its momentum with robust IIP data of 17.60% for the month of April as against 13.50% for the month of March 2010. With the successful completion of 3G & BWA auctions and partial deregulation of fuel prices, the Government fiscal deficit is going to improve significantly. This augurs well for both the equity and debt markets.

TATA LIQUID FUND

Maturity Profile:

Average Maturity	:	1.90 Months
Gross Yield to Maturity (For Debt Component)	:	5.28%

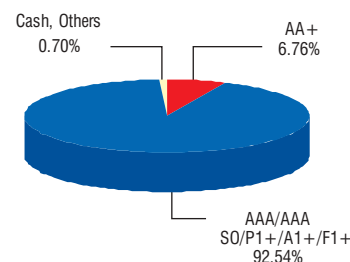

Fund manager comment :

The liquidity condition during the month of June remained tight due to 3G & BWA auctions and advance tax outflows. This resulted in short term money market yields spiking by as much as 100-150 basis points. Considering the tight liquidity scenario, RBI has taken several steps like reducing the size of T bill auction, buy back of GSec, partial reduction of GSec borrowing programme. These measures will help to reduce the pressure on the liquidity and we expect the money market yield to come off from the present elevated levels.

Gross Yield to Maturity (For Debt Component)	:	5.57%

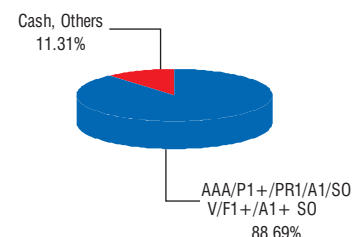

Fund manager comment :

The liquidity condition during the month of June remained tight due to 3G & BWA auctions and advance tax outflows. This resulted in short term money market yields spiking by as much as 100-150 basis points. Considering the tight liquidity scenario, RBI has taken several steps like reducing the size of T bill auction, buy back of GSec, partial reduction of GSec borrowing programme. These measures will help to reduce the pressure on the liquidity and we expect the money market yield to come off from the present elevated levels. The fund has been positioned accordingly to take advantage of the evolving liquidity scenario.

Notes and Data in the Fact Sheet

- The Std. Dev., Sharpe Ratio, Portfolio Beta & R-squared are based on one month return calculated using last 3 years data.
- Price/Earning Ratio, Price/Book Value Ratio, are based on the historical earnings and accounting numbers, and have been computed only for the invested portion of the portfolio.
- The standard deviation is used to measure the volatility of returns.
- Sharpe Ratio is the measure of the risk-adjusted performance. It is calculated by subtracting the risk-free rate from the average rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns.
- Beta is the measure of the portfolio's volatility to its respective benchmark.
- R-squared is a measurement of how closely a portfolio's performance correlates with the performance of benchmark index.
