EQUITY P/E

(An Open Ended
Equity Scheme)

FUND

For scheme details of Tata Equity P/E Fund refer pg. no. 3, 12 and back cover page for risk factors.

*Two options for investment under the Dividend option - Dividend Trigger Option A (Trigger A) and Dividend Trigger Option B (Trigger B). The Fund will initiate the declaration of dividend when there is an appreciation in NAV from the previous ex-dividend NAV by 5% incase of Trigger A and 10% incase of Trigger B in a calendar quarter, subject to maximum of one dividend per calendar quarter. Declaration of dividend is at the discretion of Trustees. As per the prevailing regulatory guidelines, dividend can be paid only out of distributable surplus. Pursuant to the payment of dividend, the NAV of the scheme would fall to the extent of the payout and statutory levy (if applicable). Due to various reasons beyond the control of the Investment Manager, it may be possible that in spite of appreciation in NAV there is no distributable surplus available on the record date. Under such a scenario, no dividend will be distributed.

Disclaimer: Trigger facility in any manner whatsoever is not an assurance or guarantee on part of Tata Mutual Fund (TMF) / Tata Asset Management Limited (TAML) to the unit holders in terms of returns or capital appreciation or minimization of loss of capital or otherwise. TMF / TAML shall not be responsible if the trigger is not achieved and / or implemented due to reasons which are beyond the control of TMF / TAML such as technology failure / default etc. Further, this trigger facility shall be subject to terms and conditions as outlined in the application form of the scheme. Trigger facility being an additional facility can be withdrawn at any time at the discretion of Trustees.

Mutual Funds investments are subject to market risks, read the scheme information document carefully before investing.

FUND MANAGER SPEAKS

Equity market

The Greek sovereign crises, increase in credit spreads along with tightening of lending standards in the property sector by the Chinese government hurt sentiment across the world causing a fall in equity markets for the month. The BSE Sensex closed down 3.5% while the Nifty closed down 3.6%. Sectors like Realty, Metals, Banking and Power underperformed the Sensex, while traditional defensive sectors like FMCG, pharmaceuticals and domestic plays like Auto and Capital Goods out-performed the index. The oil and gas sector did well with a gas price hike and expectation of further reforms. For the month, in cash equities, FIs were net sellers to the tune of approximately USD 2.1 bn (buyers of USD 2.1 billion in April '10), while Domestic Mutual Funds were net sellers with outflows of USD 160 mn (sellers of USD 580 mn in April '10).

India's real GDP saw a growth of 8.6% YoY (Year on Year) in Q4FY10, more or less in line with the consensus view with growth primarily being led by industry which grew by 13.3% YoY. This also helped the FY10 real GDP to grow by 7.4% YoY which was higher than the CSO estimates of 7.2%, primarily driven by industry and actively supported by services. In the fiscal year FY10, the industrial sector, saw a broad-based turnaround, expanding 9.3% YoY vis-à-vis 3.9% YoY in the previous fiscal. This performance was also supported by timely fiscal stimulus, generally easy monetary conditions, improvement in business sentiment and favourable base effect. The services sector grew by 8.5% in FY10 vis-à-vis 9.8% YoY in the previous fiscal. GDP for the year FY11 is expected to grow at 8% plus given the strong momentum in the economy.

The Index of Industrial Production (IIP) grew at 13.5% YoY for the month of March '10, a tad slower than the Feb'10 growth of 15.1% YoY. The cumulative growth for FY10 stands at 10.4%. In terms of sub-components, Mining, Manufacturing and Electricity sectors grew by 11.0%, 14.3% and 7.7% respectively in Mar'10 on a YoY basis. The cumulative growth for FY10 in these three sectors was 9.7%, 10.9% and 6.0% respectively on a YoY basis.

On the policy front, the government raised controlled gas prices from USD 1.8 per million metric British thermal units (MMBTU) to USD 4.2 per MMBTU. This has raised expectations of the government freeing auto fuel prices in line with the Kirit Parikh committee report, thus helping reduce the subsidy burden of the government. In other developments, the 3G auction for telecom companies raised USD 14.7 billion for the government, significantly more than the estimated USD 7.6 billion in the budget, and this is expected to help the government bring down its fiscal deficit in the current year.

The recent Greek crisis has increased risk aversion in the mind of investors. A € 110 billion package for Greece did not help calm nerves, as a revolt by the Greek people against government spending cuts involved in the deal could still hurt the process of economic stabilization. Investor concerns were not placated by the EU combined package of € 750 billion plus for all European countries in the Union. One should note that the combined estimate for a rescue of all the PIIGS (Portugal, Ireland, Italy, Greece, and Spain) nations is approximately USD 1.4 trillion, which is not a large amount for the European Union and the European Central Bank to commit for stability of the region (the US Government committed USD 13 trillion for its rescue of the US financial system). We think a sovereign credit crisis is an issue that will require continuing fiscal profligacy on part of central governments and their central banks.

The more worrisome issue is the state of the European Union financial sector balance sheets, which is much worse off compared to the state of the US financial system. Also weak political will to reform has ensured that there has hardly been any financial sector reform in the interim. Many of these European financial institutions have worrisome exposure to commercial real estate loans, private equity leveraged bonds, and mortgage securities (that are starting to reflect delinquency levels that are associated with weak growth) along with highly leveraged balance sheets.

The reasonable valuations of emerging markets (when compared to historical averages), better growth prospects and strong government balance sheets could help emerging markets eventually break away in terms of returns from the current cloud of worries over developed markets. Moreover, the fall in the commodity complex due to the European crises is positive for countries like India, who are net consumers of commodities. However, no market is insulated from a crisis in any part of the world and therefore in the near term there could be increased volatility. So, even though the Indian economy is doing well and companies are growing at a reasonable pace with balance sheets getting better over the last year, significant earnings revisions are unlikely and sectors which have linkages to the global economy and markets could keep any upward revision in the index earnings forecasts under check. Also, given the state of the global economy and therefore risk aversion, a re-rating of the market beyond historic average multiples seem unlikely in the near term. The market may remain range bound in the near term with divergent stock performance and higher returns are more likely to be driven primarily by astute stock picking.

In June '10, the markets will look forward to the onset of monsoons, advance tax numbers and publishing of annual balance sheet numbers by corporates for comfort in a turbulent international environment. Events in Europe, China and US will continue to be important drivers of risk appetite in the month.

Debt market

The rally in the bond market, which started in the month of April 2010, continued in this month as well. The benchmark 10 year yield, that had closed at 7.75% in the previous month, touched a low of 7.32%, before moving up and close at 7.56%, on profit booking as well as tight liquidity in the system towards the end of the month due to 3G auction outflows.

While the rally previous month was largely triggered by the less than expected tightening of the monetary policy by RBI and fairly low level of exposure to g-sec by the market participants, the rally during the month was fuelled by the huge success of 3G auction. As against the budgeted amount of Rs. 35k from 3G /WBA auction, the government has managed to garner close to Rs.68K from 3G auction alone. While the WBA is still under way, the total collection is expected to touch Rs.1 Trillion. This is expected to bring down the budget deficit for FY11 substantially and may even lead to cancellation of some of the auctions during the year.

Another factor, which has favored the bond bulls, is the looming sovereign debt crisis in Euro region. The Greek financial crisis that has mushroomed into a threat to the Euro zone's financial stability has resulted in a sell off in equity market across the globe. As a result of this risk aversion, the US 10 Year yield, which was around 3.70% at the beginning has come down significantly and closed the month at 3.28% . Any slow down in the economic activity in the Euro region, which is very much likely at the moment, will have some economic implications on India as well, as the Euro region is one of our dominant trading partner.

Mirroring the improved sentiments in the g-sec, the corporate bonds yields too moved down by 15-20 basis points. However towards the end of the month, it pared off some of the gains on profit booking and tracking the underlying. The 10 year and 5 year bond yield closed the month at 8.67% and 8.18% respectively.

However, amidst this huge rally in the longer end of the yield curve, the casualty has been the shorter end of the yield curve, which firmed up significantly on account of the 3G auction outflows . The rise in the shorter end of the yield curve can be gauged by the latest cut off of 3 month TB auction at 5.04% compared to around 4.4% in the previous month. The surplus money parked by Banks through LAF window came down drastically, from the average of 42K in the first 3 weeks of the month to just 0.5K towards the end of the month, on account of the 3G auction outflows. To ease the liquidity pressure, RBI has temporarily reduced the SLR by 0.5%. (applicable to the extent of Repo borrowing only) . This special liquidity window is available up to 2nd July 2010. In addition to this, RBI has even reduced the auction size of Treasury Bills for the month of June by Rs.22K. These measures are expected to ease the temporary pressure on liquidity to a great extent.

The macro economic data released during the month continued to indicate that the economic growth is on a firm footing. The 4th Qtr GDP for FY10 grew by 8.6%, compared to 5.8% in the previous year. The GDP for the whole year for FY10 stood at 7.4%. On the inflation front, we are witnessing some signs of easing off. The headline WPI for the month of April, 2010 fell to 9.59% compared to 9.9% in the previous month and we expect this trend to continue in the coming months.

Going ahead, we expect the positive sentiment to continue as the market takes comfort on the prospects of improved government finances and continued softness in global bond yields.

TATA INFRASTRUCTURE FUND

Fund positioning: Invests predominantly in companies with potential of creating long term value from expected investments in infrastructure oriented sectors.

Total Net Assets		100.00

Fund manager comment :

The economy maintained its momentum with 4th Qtr FY10 GDP growth at 8.6% as compared to 6.5% in the 3rd Qtr of FY10. The 3G & BWA auctions too has elicited huge response, with government expected to collect close to Rs.1 trillion. This will help in reducing the fiscal deficit to large extent, which augurs well for both the equity and debt markets.

TATA LIQUID FUND

Fund positioning: To generate steady income through investments in short dated papers and maintain high liquidity of the portfolio.

Maturity Profile:

Average Maturity	:	1.48 Months
Gross Yield to Maturity (For Debt Component)	:	5.09%

Fund manager comment :

The liquidity position which was comfortable in the previous month suddenly tightened due to 3G auction outflows (Rs.68K). The average surplus under LAF window which was around 40K in the first half of the month completely dried up towards the end of the month. This resulted in short term money market yields spiking by as much as 100-150 basis points. Considering the tight liquidity scenario, RBI has allowed the additional borrowings by Banks to the extent of 0.5% of NDTL for a temporary period and also reduced the size of the TBill auction to the extent of 22K. These measures will help to reduce the pressure on the liquidity. The fund has been positioned accordingly to take advantage of the evolving liquidity scenario.

Fund manager comment :

The liquidity in the system, which was comfortable in the first half of month, suddenly dried, on account of 3G auction outflows, resulting in sharp rise in the money market rates. To ease the pressure on the liquidity, RBI has taken certain measures such additional borrowing limits to the extent of 0.5% of NDTL up to 2nd July 2010 as well as reducing the size of TBill auction for the month of June by 22K. We expect the pressure on liquidity to ease gradually as the funds crawls back in to the system through government spending. The fund has been position accordingly to take advantage of the prevailing tight liquidity condition.

Notes and Data in the Fact Sheet

- The Std. Dev., Sharpe Ratio, Portfolio Beta & R-squared are based on one month return calculated using last 3 years data.
- Price/Earning Ratio, Price/Book Value Ratio, are based on the historical earnings and accounting numbers, and have been computed only for the invested portion of the portfolio.
- The standard deviation is used to measure the volatility of returns.
- Sharpe Ratio is the measure of the risk-adjusted performance. It is calculated by subtracting the risk-free rate from the average rate of return for a portfolio and dividing the result by the standard deviation of the portfolio returns.
- Beta is the measure of the portfolio's volatility to its respective benchmark.
- R-squared is a measurement of how closely a portfolio's performance correlates with the performance of benchmark index.
